Homework 8 Graded Student **Devonte Dane Billings Total Points** 100 / 100 pts Question 1 **Overview 0** / 0 pts + 0 pts Incorrect Question 2 Input and Output 12 / 12 pts **Read Instructions** 6 / 6 pts 2.1 → + 6 pts Both correct (LDI and LDR) + 3 pts Partially Correct: (1) one correct (LDI OR LDR) (2) both correct, one incorrect + 0 pts Incorrect **Write Instructions** 6 / 6 pts 2.2

→ 6 pts Both correct (STI and STR)

+ 0 pts Incorrect

+ 3 pts One correct (STI or STR) OR Two correct and one incorrect

16 / 16 pts Interrupts (no title) **6** / 6 pts 3.1 **→ +6 pts** Correct (0x0199, x0199) + 0 pts Incorrect **6** / 6 pts 3.2 (no title) → + 6 pts Correct (0x1066, x1066) + 0 pts Incorrect (no title) 4 / 4 pts 3.3 → + 4 pts Correct (0xFE80, 0x4096, 0x0140, 0x2FFF) + 3 pts Partially correct -(1) 3 out of 4 correct (2) selects 4 correct + 1 incorrect + 2 pts Partially correct -(1) 2 out of 4 correct (2) selects 4 correct + 2 incorrect + 1 pt Partially correct -(1) 1 out of 4 correct (2) selects all + 2 pts Partially correct -Gives the inverse of the correct answer (0x2110, 0x1332, 0x0500) + 0 pts Incorrect

Que	stion 4	
Trap	o Microcode	23 / 23 pts
4.1	(no title)	5 / 5 pts
	→ + 5 pts Correct (C)	
	+ 0 pts Incorrect	
4.2	(no title)	6 / 6 pts
	 → 2 pts Correct MC - Selects that processor is in supervisor mode 	
	 ✓ + 4 pts Correct explanation - makes one of the following points: (1) explains that trap vector table is in privileged memory (2) any explanation mentioning that we need to be in supervisor mode to execute trap subre 	outines
	+ 2 pts Partially correct explanation - does one of the following: (1) minor logical error in explanation (2) attempts explanation but logic is unclear	
	+ 0 pts Incorrect	
4.3	(no title)	6 / 6 pts
	→ + 6 pts Correct - (1) Save R6 in saved_ssp (2) Set R6 to saved_usp	
	+ 3 pts Partially correct - (1) selects one correct only (2) selects 2 correct + 1 incorrect	
	+ 0 pts Incorrect	

4.4 (no title) 6 / 6 pts

- → + 6 pts Correct -
 - (1) old PSR is pushed
 - (2) old PC is pushed
 - + 3 pts Partially correct -
 - (1) one correct
 - (2) two correct + one incorrect
 - + 0 pts Incorrect

Question 5

Trap Execution 8 / 8 pts

+ 0 pts Incorrect

→ + 8 pts Correct (0x2DE4)

Question 6 The Processor Status Register **13** / 13 pts (no title) 4 / 4 pts 6.1 + 0 pts Incorrect ✓ + 4 pts Correct (user mode) 6.2 (no title) **5** / 5 pts **→ + 5 pts** Correct (4) + 0 pts Incorrect (no title) 4 / 4 pts 6.3 **→ + 4 pts** Correct (P) + 0 pts Incorrect Question 7 **16** / 16 pts **Interrupt Execution** 4 / 4 pts 7.1 (no title) + 0 pts Incorrect ✓ + 4 pts Correct (0x3051, x3051) 7.2 (no title) 4 / 4 pts + 0 pts Incorrect ✓ + 4 pts Correct (0x8401, x8401) 4 / 4 pts 7.3 (no title)

4 / 4 pts

✓ + 4 pts Correct (0x2031, x2031)

→ + 4 pts Correct (0x0601, x0601)

+ 0 pts Incorrect

+ 0 pts Incorrect

(no title)

7.4

Returning from Interrupts

12 / 12 pts

8.1

(no title) 6 / 6 pts

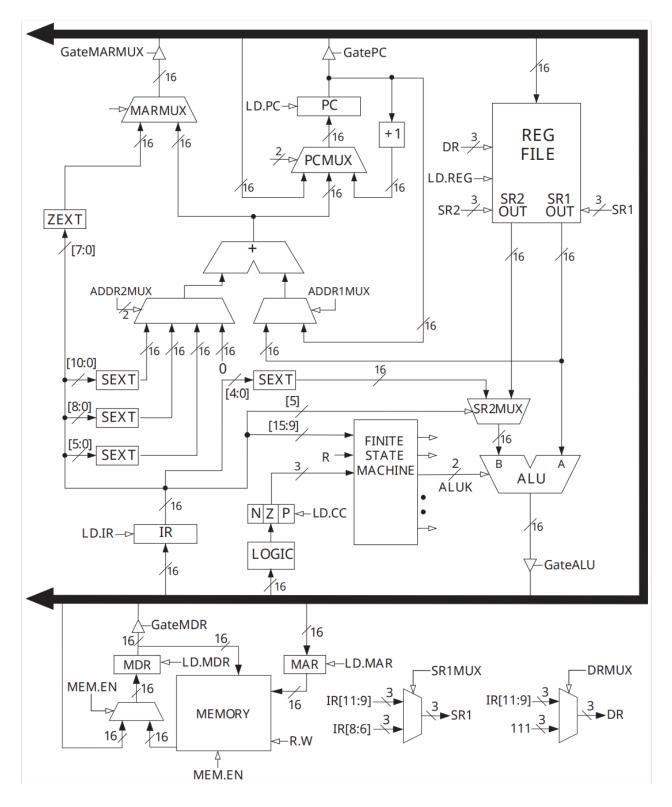

- - (1) mentions RTI, we use that instead
 - (2) explains that RET is just JMP R7, which in trap handlers we don't use R7
 - + 2 pts Partially correct explanation -
 - (1) attempts to explain, but incorrect logic
 - + 0 pts Incorrect

8.2 (no title) 6 / 6 pts

- - (1) gives example of interrupt during interrupt
 - (2) explains other valid situation where we would not change to user mode
 - + 2 pts Partially correct explanation -
 - (1) attempts correct explanation, but incorrect logic
 - + 0 pts Incorrect

This homework is worth a total of 100 points.

We have provided LC-3 datapath and instruction set here, but LC-3 reference materials can **also be found in Canvas > Files**.

This question (Q1) cannot be answered. It's used for formatting instructions. Do not worry about Gradescope saying you haven't answered one question. It's this

one!

Please complete the following problems. The collaboration policy for the course still applies. Refer to the syllabus for details regarding this policy.

Q2 Input and Output 12 Points

Q2.1 Read Instructions 6 Points

Which of the following instructions can be used to read a value from a device with a memory-mapped I/O register?

✓ LDI	
✓ LDR	
LEA	
RTI	
STI	
STR	

Q2.2 Write Instructions 6 Points

Which of the following instructions can be used to store a value to a device with a memory-mapped I/O register?

LDI	
LDR	
LEA	
☐ TRAP	
✓ STI	
✓ STR	

Q3 Interrupts 16 Points

Use the following scenario for Q3.1 and Q3.2:

I have a switch attached to the LC-3 that causes an interrupt when it is pressed, with the interrupt vector 0x99. I also have an interrupt service routine that begins at address 0x1066.

To make my service routine handle the interrupt caused by pressing the switch, I need to ensure a certain entry in the interrupt vector table is set to a certain value.

Q3.1 6 Points

What is the **address** of the entry in the **interrupt vector table**?

Please answer in hexadecimal using 4 digits, and add the prefix 0x in front of your answer. (ex. 0x0211)

	-		_				_	_		_						-	_					_					-	-			
	0)>	(() '	1	9	Ç)																							
		_							 _												_			_	_						

Q3.2 6 Points

What **value** should be stored in that entry?

Note: Please answer in hexadecimal using 4 digits, and add the prefix 0x in front of your answer. (ex. 0x0211)

,	
i I	
0x1066	
1	

Q3.3 4 Points

Which of these addresses are unsafe locations for an interrupt service routine to begin at?

Note: The LC-3 memory layout is included at the top of this assignment.

Q4 Trap Microcode 23 Points

Q4.1 5 Points

What is the PC set to on execution of a TRAP instruction?

- PC ← TrapVect8
- \bigcirc PC \leftarrow MEM[SEXT(TrapVect8)]
- PC ← MEM[ZEXT(TrapVect8)]
- \bigcirc PC \leftarrow MEM[TrapVect8]
- PC ← MEM[MEM[SEXT(TrapVect8)]]

Q4.2 6 Points

What is the mode of the processor after the execute phase of a TRAP instruction?

- O The processor is in user mode
- The processor is in supervisor mode
- The processor's mode doesn't change

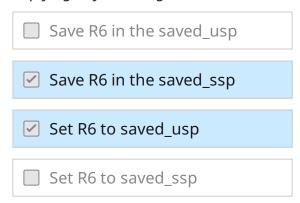

Explain your answer in three sentences or less.

After a TRAP instruction is executed, the processor needs to be in the supervisor mode, or privileged memory. This is because the TRAP vector table and its subroutines are also in the privileged memory. In order to access these TRAP subroutines, you need to be in the supervisor mode.

Q4.3 6 Points

Which of the following operations regarding R6 happen during the execution of a RTI instruction?

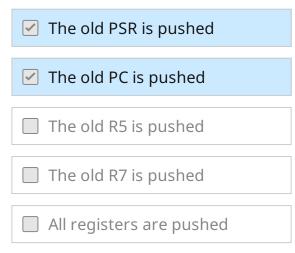

Assume the RTI is moving from supervisor mode to user mode. Note that we are not implying any ordering to these events.

Q4.4 6 Points

Which of the following registers are pushed onto the stack during a TRAP instruction's execution?

Note that we are not implying any ordering to these events.

Q5 Trap Execution

8 Points

Given the following excerpt from the LC-3's memory, after the instruction OXF003 is executed, what is the address of the next instruction to execute?

Memory address	Value in Memory
0x0000	0x18D8
0x0001	0x08FE
0x0002	0x0794
0x0003	0x2DE4
0x0004	0x1EC9
0x0005	0x1D42
0x0006	0x2613
0x0007	0x214B
0x0008	0x23B3
0x0009	0x203A
0x000A	0x086E
0x000B	0x05CB
0x000C	0x0CEB

Memory address	Value in Memory
0x000D	0x13F5
0x000E	0x2832
0x000F	0x1ACA
Please answer in hexadecimal using 4 digits answer. (ex. 0x0211)	s, and add the prefix 0x in front of your
0x2DE4	

Q6 The Processor Status Register 13 Points

For the following questi	ons, assume the val	ue of the PSR is 0x8401.
--------------------------	---------------------	--------------------------

Q6.1 4 Points
What is the current mode?
what is the current mode:
Supervisor mode
✓ User mode
Q6.2 5 Points
5 Politis
What is the current priority? Write yo
4
Q6.3
4 Points
What are the current condition codes
□N
Z
✓ P

Q7 Interrupt Execution 16 Points

Assume the **PSR holds** 0x8401 (just as in Question 6). This is the state of memory after the execution of an **STI instruction at address** x3050:

Memory Address	Value in Memory
0x0042	0x1331
0x0142	0x2031
0x3050	0xB41D

Now, suppose the processor **receives an interrupt with vector** 0x42.

Q7.1 4 Points

Assume the **incoming interrupt has a priority of 4**, what is the address of the **next instruction to be executed**?

Please answer in hexadecimal and add	a prefix of [0x] in front of your answe	r. (ex. [0x2110)
0x3051			

What is the PSR when the next instruction executes? Assume the condition codare unchanged.	es
Please answer in hexadecimal and add a prefix of $0x$ in front of your answer. (ex. $0x2^{-1}$	110)
0x8401	
Q7.3 4 Points	
If the incoming interrupt had priority 6, what is the address of the next instruction to be executed?	
Please answer in hexadecimal and add a prefix of 0x in front of your answer. (ex. 0x21	10)
0x2031	
Q7.4 4 Points	
What would be the PSR when the next instruction executes if the interrupt had priority of 6? Assume the condition codes are unchanged.	а
Please answer in hexadecimal and add a prefix of $0x$ in front of your answer. (ex. $0x21$	10)
0x0601	

Q7.2 4 Points

Q8 Returning from Interrupts 12 Points

Q8.1 6 Points

Using RET to return from a trap handler subroutine is sufficient to safely return to user mode.

- True
- False

Explain your answer in three sentences or less.

RET cannot even access privileged memory, the memory required for trap subroutines to be handled. In order to return from a trap handler subroutine, the privileged instruction RTI is required.

Q8.2 6 Points

RTI always changes the processor mode to user mode.

- O True
- False

Explain your answer in three sentences or less

RTI checks the 15th bit of PSR in order set R6 properly. Only if PSR[15] == 1, then the processor will switch back to the user mode.
